                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CC This sequence represents a peptide that specifically binds to the human CC HPT-1 protein. The invention relates to purified proteins (I) that bind CC specifically to at least one of the gastro-intestinal (GI) tract CC receptors human intestinal peptide-associated transporter (HPT1), CC hPEPT1, D2H and human sucrose-isomaltase complex (hSI). (I) provide active transport of therapeutic agents through human and animal GI tissue CC (into the blood) for in vivo delivery, particularly for treatment or CC receptors in a protein, diabetes, osteoporosis, haemophilia, anaemia, CC cancer, migraine, or angina pectoris. Specifically they are used to CC deliver insulin or leuprolide, but many other suitable therapeutic agents CC and antigens. (I) may also provide targeting to the GI tract. Other uses CC and in are: (1) to determine the level of specified receptors in a sample CC (in a binding assay); and (ii) to screen for molecules that bind (I). CC Immunogenic analogues or derivatives of (I) are used to raise antibodies and in immunoassays. The antibodies are used to locate, detect and CC measure (I), e.g. for imaging, monitoring treatment, tissue analysis cc etc., also for peptide purification and immobilisation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

                                                                                                                                                            В
                                                                                                                                                                                         CC D2H protein. The invention relates to purified proteins (1) that bind CC specifically to at least one of the gastro-intestinal (GI) tract CC receptors human intestinal peptide-associated transporter (HPT1).

CC hPEPT1, D2H and human sucrose-isomaltase complex (hSI). (I) provide CC active transport of therapeutic agents through human and animal GI tissue CC (into the blood) for in vivo delivery, particularly for treatment or CC prevention of hypertension, diabetes, osteoporosis, haemophilia, anaemia, CC cancer, migraine, or angina pectoris. Specifically they are used to CC deliver insulin or leuprolide, but many other suitable therapeutic agents CC and antigens. (I) may also provide targeting to the GI tract. Other uses of (I) are: (i) to determine the level of specified receptors in a sample CC (in a binding assay); and (ii) to screen for molecules that bind (I). CC Immunogenic analogues or derivatives of (I) are used to raise antibodies and in immunoassays. The antibodies are used to locate, detect and CC measure (I), e.g. for imaging, monitoring treatment, tissue analysis CC etc., also for peptide purification and immobilisation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The inventiuseful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABL01847-ABBR72072).
                                                                                                                                                                                             WPI;
          The present sequence represents a KIAA0550 polypeptide. The specification describes a non-naturally occurring Type I repeat peptide (TRP), derived from human thrombospondin-1 (hTSP-1), KIAA0688 or KIAA0550 proteins. The TRP protein is an anglogenesis inhibitory protein. TRP
                                                                                                                                                                                                                                                                                                                                                                                                                      НОПО
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from at ftp.wlpo.int/pub/published_pct_sequences.
                                                                                               Claim
                                                                                                                                            Non-naturally occurring Type I repeat peptide (TRP) derived from thrombospondin-1, KIAA0688 or KIAA0550 proteins, useful in the

                                                                                                             The present sequence is the sequence of a human secreted protein. Its CDNA was isolated from a foetal brain cDNA library. The proteins and coding sequences of the invention can be used in the isolation of similar genes and proteins, in the elucidation of their function in vivo, and to treat a number of conditions. It is possible that they may have uses as nutritional supplements, as cytokine or cell proliferation factors, in immune modulation, where they may be used to treat immune and autoimmune diseases, as haematopolesis regulators (treating myeloid or lymphoid cell deficiencies), in the promotion of tissue growth, they may have chemokine or chemotactic activity, haemostatic or thrombolytic activity, or anti-inflammatory activity.
                                                                                           Sequence
                                                                                                                                                                                                                                                           Claim
                                                                                                                                                                                                                                                                              New secreted proteins and polynucleotides encoding them, which are derived from Homo sapiens, useful for therapy, diagnosis, and research, as well as nutritional sources or supplements -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL0.1840-ABL16175) and the encoded proteins
The protein was produced by expression of a synthetic gene. analogue comprises AAs 43-123 of the native p. falciparum of protein, followed by four repeat sequences (three "B"s, i.e
                                                                                                          Claim 10; Fig 8;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CS protein;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Circumsporozoite analogue Falciparum 3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAR07289 standard; protein; 184 AA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (ABB57737-ABB72072).

The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from
                                                                                                                                                                                   Recombinant plasmodium circumsporozoite analogues - lacking one or more repeat epitope(s) for use as a malaria sub-unit
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   11-APR-1990;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match
                                                                                          polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy technique; to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             and one "A", i.e. NVDP), followed by AAs 289-374 of the native protein. Reduction of the immunological dominance of the repeat relative to the epitopes in the regions flanking the repeats enhances sporozoite neutralising activity.

The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.
                                                                                                                                                                                                                           The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromo and gene mapping, and in recombinant production of (II). The

                                                                                                                                                                                                                                                                                         Ota T,
                                                                                                 The present sequence represents a thrombospondin 1-like (TSP1-like) protein. The cDNA sequence encoding human TSP1-like protein was isola from a human 10 week-aged foetal tissue cDNA library. The TSP1-like protein may be involved in intracellular vesicle transport. Secretion of the TSP1-like protein is reduced in brain tumours. It can be used in the screening of target compounds, and is useful for diagnosis, prediction and treatment of brain tumour.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

                                                                                               The present sequence represents a kidney injury associated molecule (CC (KIM) protein. KIM proteins can be administered therapeutically CC by expressing KIM encoding polynucleotides, to promote growth and/or CC survival of damaged tissue (e.g. renal tissue), since the KIM proteins CC survival of damaged tissue (e.g. renal tissue), since the KIM proteins CC KIM fusion proteins, conjugates, antibodies and vectors can also be used CC KIM fusion proteins, conjugates, antibodies and vectors can also be used CC KIM fusion proteins, conjugates, antibodies and vectors can also be used CC therapeutically, e.g. these or the KIM proteins may be included with an acceptable carrier in pharmaceutical compositions, useful for therapy/ crophylaxis of conditions associated with disfunction/disregulation of CC KIM genes or proteins, especially renal diseases or impairments of renal function in humans (e.g. acute renal diseases or impairments of renal function in humans (e.g. acute renal failure, acute nephritis). The cc polynucleotides can be used to produce antisense sequences which, when CC internalised into cells, can disrupt expression of a cellular KIM gene, as on the proteins and polynucleotides are cuseful diagnostically e.g. to block the growth of tumours dependent on CC KIM for growth) or compositions. The proteins and polynucleotides are cuseful diagnostically e.g. to detect and quantify renal injury or impaired confunction), or abnormal responses to tissue injury (indicative of increased risk, or presence of, renal injury (indicative of increased risk, or presence of, an autoimmune response or abnormal can calso be used to locate KIM-producing cells (especially specific local).
                                                             e.g. tissue masses abnormally producing/expressing KIM such as tumours arising from/affecting renal tissue), by contacting cells with an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Kidney injury associated molecule; kidney injury related mol KIM; tissue growth promotion; regeneration; renal condition; acute renal failure; acute nephritis; tumour.

                                                                                                                                                      The invention relates to isolated polynucleotide (I) and CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC for identifying expressed genes. (I) is useful in gene therapy techniques CC for identifying expressed genes. (I) is useful in gene therapy techniques CC (II). (II) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical considered involving partners are useful for treating CC diagnost of sites expressing (II). (I) and (II) are useful for treating CC diagnostics, forensics, gene mapping, identification of mutations in CC diagnostics forensics, gene mapping, identification of mutations in CC diagnostics forensics gene mapping, identification of mutations (I) and products dependent on DNA and CC and to produce other types of data and products dependent on DNA and CC amino acid sequences. ABG00010-ABG30377 represent novel human CC diagnostic amino acid sequences of the invention.

CC Note: The sequence data for this pattent did not appear in the printed CC at fits. Wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                          The invention relates to isolated polynucleotide (I) and C polypeptide (II) sequences. (I) is useful as hybridisation probes, CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags CC for identifying expressed genes. (I) is useful in gene therapy techniques CC (II). (II) is useful for generating antibodies against it, detecting or CC (II). (II) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as CC a food supplement. (II) and its binding partners are useful in medical CC imaging of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. CC The polypeptide and polynucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations CC responsible for genetic disorders or other traits to assess biodiversity CC and to produce other types of data and products dependent on DNA and CC amino acid sequences. ABG00010-ABG30377 represent novel human CC diagnostic amino acid sequences of the invention.

CC Note: The sequence data for this patent did not appear in the printed construction. Int/pub/published_pct_sequences.

                          telanglectasia, plaque neovascularisation, haemophiliac joints, angiofibroma or wound granulation. The composition induces apoptosis and inhibits neovascularisation in the tumour cells. This amino acid sequence represents a recombinant protein, 3TSR, derived from mouse thrombospondin-2 (TSP-2) and containing the 3 type 1 repeat (TSR) regions of TSP-2, described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 neovascular glaucoma; retrolental fibroplasia; rebeosis; angiofibroma; Osler-Webber syndrome; myocardial angiogenesis; haemophiliac joints; plague neovascularisation; telanglectasia; wound granulation;
                                                                                                                                                                                                                                                    diabetic retinopathy, retinopathy of prematurity, macular degeneration, corneal graft rejection, neovascular glaucoma, retrolental fibroplasias.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    useful for killing cancerous cells (preferably tumour); for reducing volume or inhibiting growth of a tumour (inhibiting neovascularisation the tumour); for decreasing proliferation of tumour cells; in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  of human thrombospondin-1 (TSP -1), a type 1 repeat polypeptide and potent inhibitor of tumour growth and anglogenesis. The composition is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Composition useful for treatment of cancer comprises cDNA encoding amino acids of human thrombospondin-1 or its conservative variant and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           06-DEC-2001.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
